

IMPROVE WORKFORCE SKILLS

e-Learning can constantly improve skills at all levels in the organisation

REPEATABLE TRAINING OUTCOMES

Standardised courses ensure that the same training is received by everyone and standards are consistently applied

RECORDS

Accurate and complete records of courses and results are available for each employee

ANALYSE

Training requirements can be analysed from OpSUITE™ and learners can be proposed for new courses based on their use of the system.

DESIGNED FOR YOU

Training courses can be taken from our growing catalogue of standard courses, or designed specifically for your company.

Using online training to bridge the gap between procedures and practice

The Problem

Having well defined procedures to govern safe working practices, and good technology systems to support them, is essential. But safe work systems rely on trained and competent personnel to execute them.

Employers are responsible to ensure that only competent people operate in hazardous situations and with potentially hazardous processes.

The Opportunity

- What if plant personnel could access training anytime, anywhere?
- What if they could “refresh and revise” the procedures directly relating to work they are about to do?
- What if the competence of personnel could be assessed “on the job” and targeted training made available to ensure the correct implementation of safe work procedures?
- What if results were measured and recorded to guarantee the effectiveness of training?

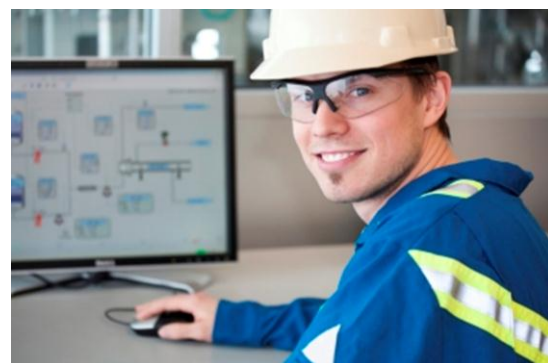

The Solution

ApplyIT has partnered with Greenlight Training, specialist provider of innovative e-Learning solutions, to allow us to offer our clients dynamic online training as an integral part of day-to-day plant safety. Available 24/7 at the learner's convenience, targeted self-paced training can empower plant personnel with knowledge when they need it!

Some Benefits

E-Learning can form an important part of an overall training program that offers many compelling benefits:

- Training is on offer 24/7 at the learner's convenience – accommodating shift and other typical operational constraints
- Courses are scheduled, managed and delivered consistently
- Short refresher training courses can be delivered exactly when and where needed
- Rich, dynamic, short interactive e-learning courses designed by experts are readily embraced by learners

Adding a new dimension to OpSUITE™

While e-Learning solutions can be implemented independently, they can add most value when integrated into your operational systems.

OpSUITE™ can help manage activities on a plant based on a person's competency. These activities include, for example, preparing a permit to work, accepting a permit, working in hazardous areas, performing maintenance, shift handover etc.

When these competencies are reinforced using an integrated e-Learning platform it is possible to ensure that your policy and procedures are implemented, and that additional training is easily available to learners who need additional competencies.

The result is a safer working environment and improved operations performance.

Total Operations Insight

For more than 10 years ApplyIT has been working with customers in the energy, mining and manufacturing sector to implement best-of-breed technology solutions that support and reinforce the implementation of safe work systems. Our experience has taught us that the effectiveness of training is directly linked to operations performance.

Want to know more?

Together with Greenlight we will be more than happy to arrange a demonstration and give you access to sample course material. Contact us now at 080-APPLYIT to find out how to proceed.
